

ABSTRACT OF THE DISCLOSURE

The bicycle wheel with spinner attachment is a bicycle wheel and removable spinner attachment for the front and rear wheels of a bicycle. The wheel has a hub, a rim and a structural member connecting the hub to the rim. The structural member can be decorative spokes, a thin plate or flat plates that extend up from the hub to the rim. The hub has hub extensions extending from the wheel. A spinner mount is disposed on each hub extension and fixed to the wheel. A bearing assembly is mounted on the spinner mount, and a spinner is attached to the bearing assembly for rotation when the bicycle accelerates. The spinner continues to rotate by inertia when the bicycle is stopped. Preferably the wheel is made as a unitary body resembling an automobile wheel in ornamental appearance.
